# hygger manual aquarium marine hydrometer

## HG047

### Manual:

1. Remove the product base from the clear plastic and attach it to the bottom of the plastic shell to stabilize the hydrometer.
2. Please put it into the saltwater aquatic pool slowly until water comes to the black line carved on the meter. Then, put it horizontally and read the scale.
3. If there are any bubbles attached to the pointer of the hydrometer while adding water, please use the plastic rod equipped with the hydrometer to gently stir the bubbles until they are eliminated. Otherwise, the scale may be inaccurate.
4. The outside scale indicates salinity (PPT), and the inside scale indicates gravity. The suggested gravity range should be between 1.020~1.023 under a temperature of 77°F ( 25°C ).
5. Use clean water to clean the hydrometer every time after using it. You'll get an inaccurate scale if any sediments of saltwater or salt accumulated on the pointer. So, after using the hydrometer, please use warm water or vinegar to soak it for 30 minutes. Then, rinse it with clean water and dry it naturally.
